- GitHub: https://github.com/haf169

Software Engineering graduate from FPT University with hands-on experience in full-stack web development. Strong background in Java, JavaScript/TypeScript, and modern frameworks such as ReactJS, NextJS, Spring Boot. Experienced in building multi-tier web applications, working in Agile/Scrum environments, and collaborating with cross-functional teams. Highly motivated, responsible, and eager to grow in an international software development environment.

KEY PROJECTS

Edusphere – Student & Activity Management System

Aug 2025 – Dec 2025
Team size: 5 members

Description: A web-based platform that helps educational institutions manage students, classes, clubs, and extracurricular activities in a centralized system.

Technologies: ASP.NET Core Web API, ReactJS, SQL Server, AWS, Netlify

Key Contributions:

- Led frontend development using **ReactJS**, ensuring a consistent user interface and high-quality user experience
- Designed and implemented core modules including student management, class management, club management, and event creation
- Developed event workflows supporting assignment submissions and sports tournaments with knockout brackets
- Built and maintained **RESTful API** integrations between frontend and backend services
- Deployed backend services on **AWS**, handling environment configuration and application hosting
- Deployed and managed the frontend application on **Netlify**, enabling continuous deployment from **Git repositories**
- Collaborated closely with team members using **Git** and followed **Agile/Scrum** practices
- Applied **Clean Code** principles and reusable component patterns to improve maintainability
- Created **system architecture diagrams**, deployment overviews, and contributed to **technical documentation** and **test reports**

OMGMart – Mini Mart Management System

Feb 2025 – Jun 2025
Team size: 5 members

Description: A full-stack management system that supports daily supermarket operations including inventory, sales, promotions, and online payments.

Technologies: NodeJS (Express), NextJS, MongoDB, AWS.

Responsibilities & Achievements

- Developed a full-stack web application covering the complete supermarket workflow from warehousing to sales
- Implemented inventory and stock management features with real-time data updates

OMGMart – Mini Mart Management System

- Built functionality for discount codes, promotional campaigns, and sales statistics
- Integrated online payment features to support modern purchasing workflows
- Designed RESTful APIs and connected them with frontend pages built in NextJS
- Worked closely with team members using Git and followed Agile/Scrum practices

WORK EXPERIENCE

FPT Software – Software Development Intern

Sep 2024 – Jan 2025

- Developed and maintained full-stack web applications following Agile/Scrum practices using Springboot for backend and ReactJS for frontend.
- Collaborated with team members via Git and participated in daily stand-up meetings
- Applied Clean Code principles and Design Patterns to improve code readability and maintainability
- Contributed to both frontend and backend components in real-world enterprise projects

SKILLS

Technical Skills

- Programming: LanguagesJava, JavaScript, TypeScript, SQL
- Frontend: ReactJS, NextJS
- Backend: NodeJS (Express), Spring Boot, RESTful API design
- Databases: SQL Server, MySQL, MongoDB

Soft Skill

- Strong sense of responsibility and teamwork
- Clear communication and technical writing skills
- Ability to work independently and under pressure
- Passion for software development and continuous learning

Tools & Methodologies

- Git (GitHub, GitLab)
- Agile / Scrum
- Clean Code, Design Patterns
- Jira

EDUCATION

FPT University - Software Engineer

2021 – 2025

- **GPA 7.3**
- **HONORABLE OF STUDENT FOR SU2025**

LANGUAGES

- **English:** Intermediate
- **Japanese:** Basic
